* HFCs and PFCs are classes of greenhouse gases that include many compounds. These columns may reflect the total emissions of multiple HFC and PFC compounds, each of which has a unique Global Warming Potential (GWP). Emissions of each gas are first multiplied by their respective GWP and then summed in the total CO2-equivalent column.

Indirect Emissions	CO2e	CO2	CH4	N2O	Unit

VERIFICATION INFORMATION

Verification Body: SCS Engineers

Basis of Verification Opinion: The University of California, Santa Cruz (UCSC) submitted their 2008 greenhouse gas (GHG) emission inventory report to SCS Engineers (SCS) for verification. SCS reviewed the emission inventory against the Registry's General Reporting Protocol (Version 3.1, January 2009), following the procedures outlined in the Registry's General Verification Protocol (Version 3.0, August 2008).

On February 2, 2010, SCS issued a verification report to UCSC documenting verification activities as well as material/immaterial misstatements in the GHG inventory. No material misstatements were identified. SCS uploaded a completed verification opinion and verification activities checklist to CCAR on February 2, 2010.

Based on the information provided, SCS is able to verify UCSC's 2008 annual emissions report without qualification.
